

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

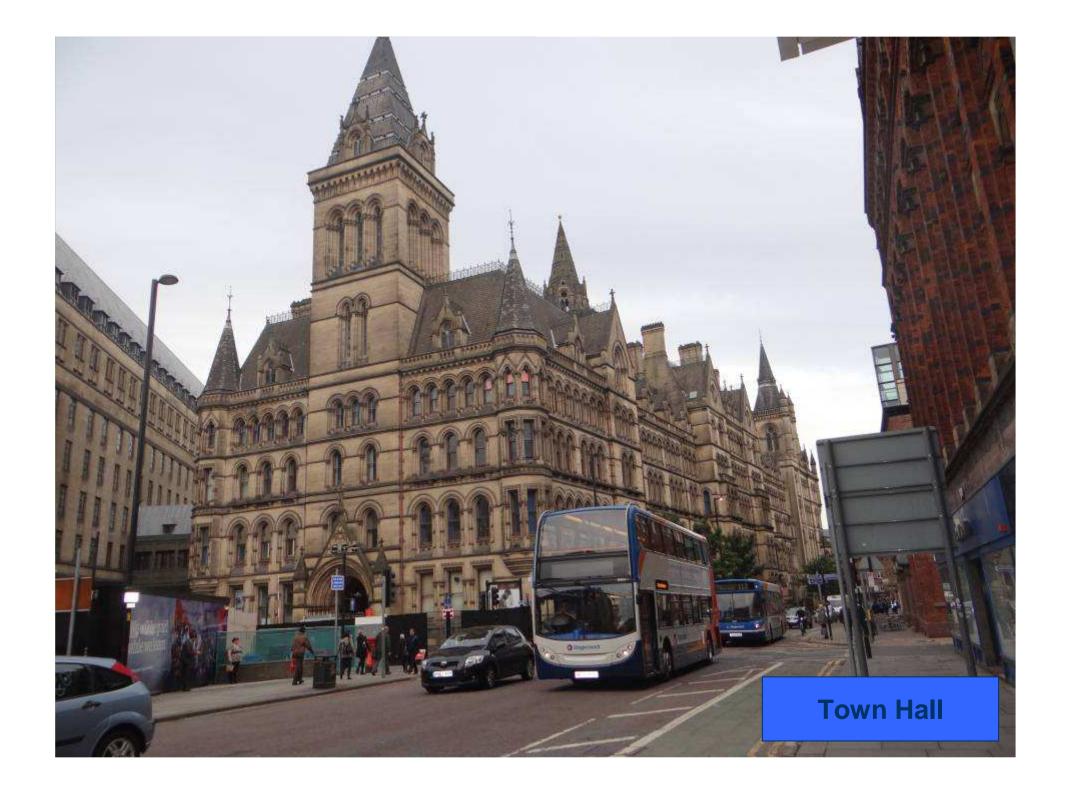

Partnerství pro rozvoj vzdělávání a komunikace v ochraně přírody

reg. číslo: CZ.1.07/2.4.00/17.0073

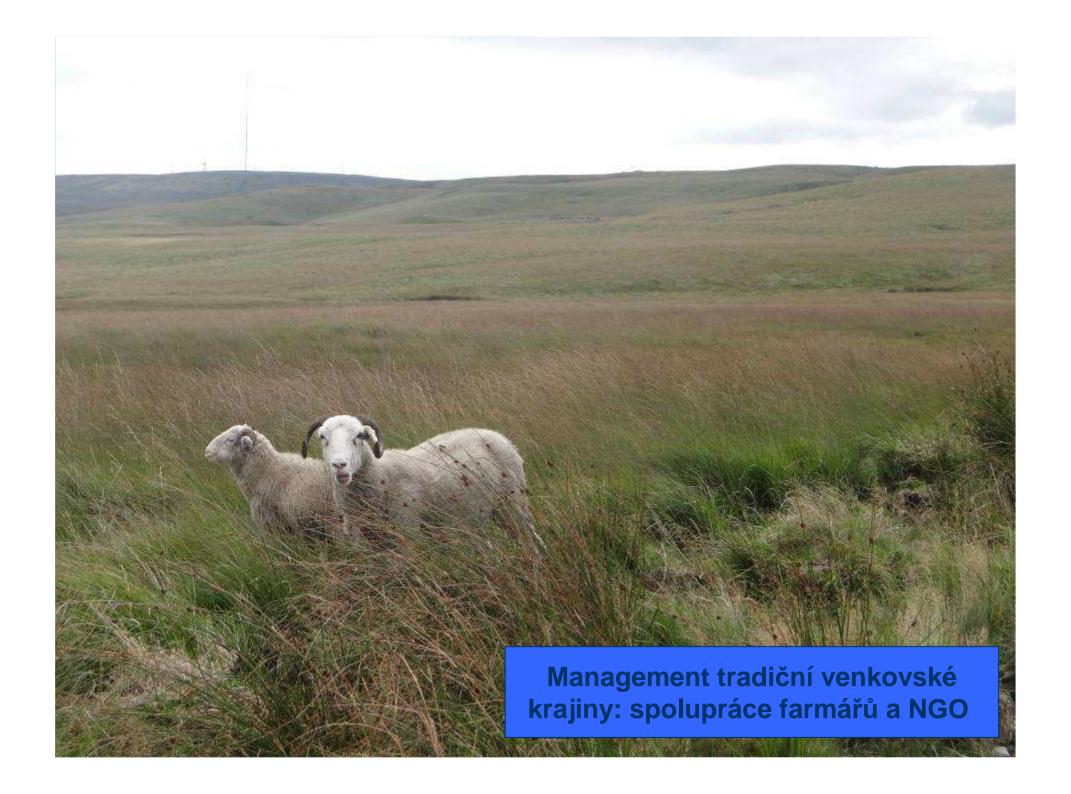

Zahraniční stáž Velká Británie

9.9. - 28.9.2013

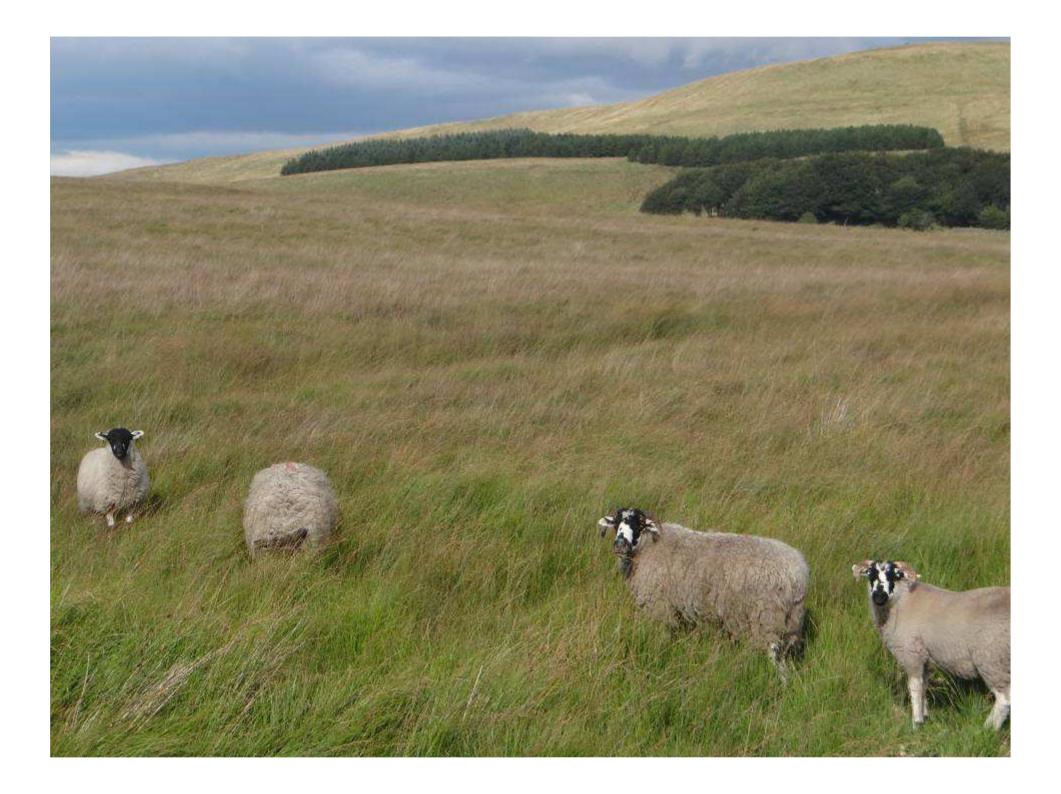

Welcome. Deerbolts Wood is open to the public however please note that some of our larch trees are infected with *Phytophthora ramorum*

What are we doing? We will be felling larch trees (marked with orange dots) to stop any further spread of *P. ramorum*. We will also be cutting Rhododendron Ponticum as this is the main host species.

What are the Signs? Leaf or needle blackening, lesions, wilted shoots and die-back, lesions. Is it harmful to Me? It doesn't affect people or animals so no need to worry. You can't see it but it can be spread by soil and needles getting onto people and their pets.

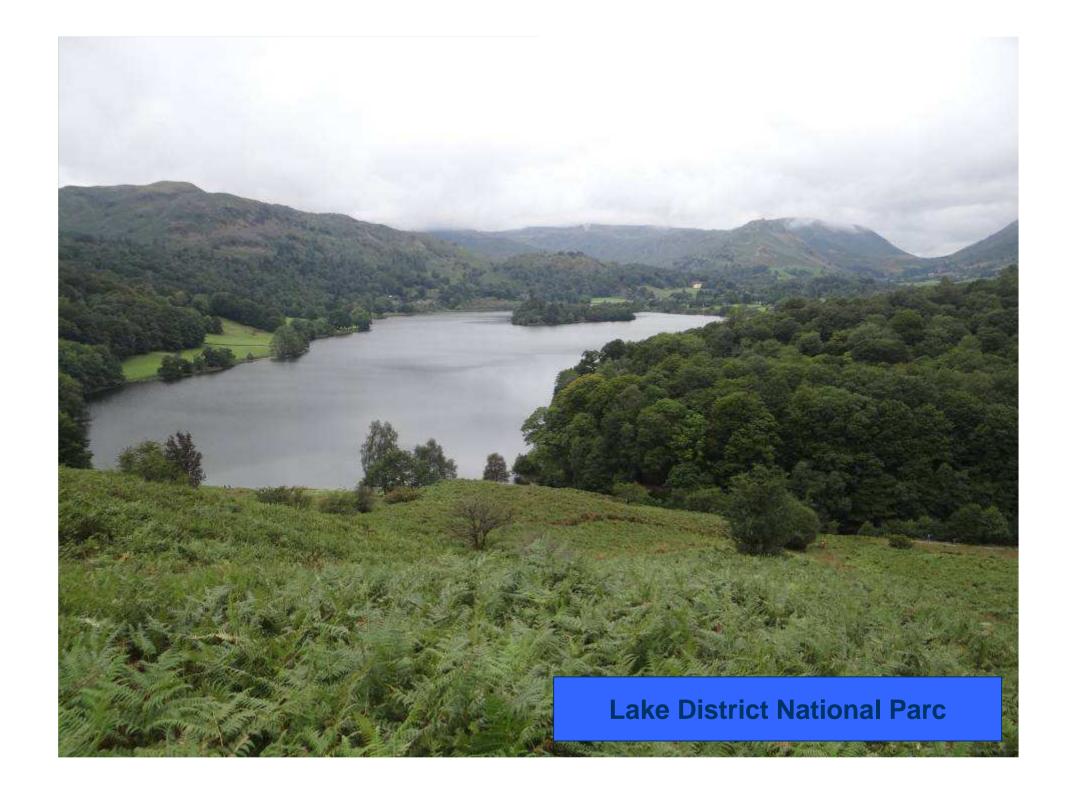

What is it?

P. ramorum is a fungus like organism that can kill many kinds of trees and shrubs.
